Solar PV System Installed on St. Nicholas Senior Apartments

Arch Electric recently installed and commissioned a 30-kilowatt solar electricity (PV) system for St. Nicholas Redevelopment in the City of Sheboygan. The solar array was installed on the roof of the St. Nicholas Senior Apartments located at 916 Huron Ave. One hundred twenty six (126) solar modules were installed on a custom-engineered steel racking system. On an annual basis the Solar PV System will produce over 36,000 kilowatt hours of electricity and save the property over \$4,300. The solar panel company has a production facility in Georgia, the racking system was designed and manufactured in Southeast Wisconsin, and the NABCEP Certified installers from Arch Electric are local residents. The former St. Nicholas hospital building was renovated into Senior Apartments in 1980. Based in Plymouth, WI, Arch Electric is a leading designer and installer of renewable energy throughout the Midwest, having commissioned close to 2-Megawatts of renewable energy on businesses, homes, churches, farms, YMCA's and other organizations.
